KALPITHA SRINIVAS

+91 8431973076|kalpithaasrinivas@gmail.com| LinkedIn | GitHub |Bengaluru, Karnataka

SUMMARY

DevOps Engineer with hands-on experience in AWS, Kubernetes, Docker, and CI/CD automation. Experienced in building and deploying containerized applications on AWS EKS using Helm, GitHub Actions, and Argo CD. Skilled in cloud infrastructure, deployment automation, and supporting scalable production systems.

EDUCATION

JSS Academy of Technical Education Bengaluru, India
Bachelor of Engineering in Computer Science: CGPA: 8.46 2019-2023

SKILLS

- DevOps Tools: GitLab CI/CD, KOB, KOBACE, SonarQube, Vault, Snyk, Splunk, Confluence, Github Actions, Argo CD
- Cloud & Infra: PCF, Kubernetes, AWS (EC2, ECS, EKS, ALB, Lambda, IAM, S3, CloudWatch, Cost Explorer), GCP (Compute Engine, Bastion Host), Docker, Helm, Terraform, Linux, YAML, NGINX Ingress
- Programming & Web: Python, SQL, HTML, CSS, React
- Other: Git, Data Structures & Algorithms, Debugging & Troubleshooting

PROFESSIONAL EXPERIENCE

OPT IT Technologies Bengaluru, India
DevOps Engineer Sept 2025- Present
Project: ParkQuility and Shikshalokam

- Support production cloud-native applications on AWS, ensuring infrastructure stability across multiple environments.
- Manage and troubleshoot AWS services including EC2, ECS, ALB, Lambda, IAM, and CloudWatch, resolving deployment and runtime issues.
- Configure and maintain CloudWatch alarms for 10+ EC2 instances, enabling proactive monitoring and incident detection.
- Handle Linux administration tasks including SSH access setup, sudo provisioning, permission troubleshooting, and GCP bastion host storage expansion
- Assist in maintaining CI/CD workflows, supporting container-based deployments and release validation for cloud-hosted applications.

Dell Technologies Bengaluru, India
DevOps Engineer June 2024 - July 2025
Project: DMX MyAccount – KOB Migration

- Migrated 25+ micro frontends (MFEs) from PCF to Kubernetes on Bare Metal (KOB), improving deployment scalability and reducing platform dependency.
- Reduced deployment configuration errors by 40% by implementing Helm-based reusable templates across multiple environments.
- Standardized containerization strategy by designing Dockerfiles optimized for smaller image size and faster startup time.
- Eliminated configuration drift across environments by centralizing configuration management using KOBACE.
- Improved release reliability and deployment consistency across non-production clusters by automating CI/CD workflows using GitLab pipelines.

Tequed Labs Bengaluru, India
Artificial Intelligence & Machine Learning Intern Sep 2022- Oct 2022

- Developed a fake news detection model using NLP techniques, applying classification and clustering to distinguish real and fake news articles.
- Gained hands-on experience applying AI/ML concepts to real-world text data, including feature extraction and language pattern analysis.

PROJECTS

End-to-End CI/CD and GitOps Deployment on AWS EKS | Docker, Kubernetes, Helm, Argo CD, GitHub Actions, AWS

- Containerized a Go web application using Docker and automated image build and push to DockerHub using GitHub Actions.
- Built reusable Helm charts to deploy and manage the application on AWS EKS with version-controlled configurations.
- Implemented GitOps continuous deployment using Argo CD to automatically sync and deploy changes from GitHub to Kubernetes.
- Configured NGINX Ingress Controller and AWS LoadBalancer to expose the application, achieving a fully automated end-to-end deployment pipeline.

Biometric Authentication System – Python | Flask | Daugman Algorithm | CNN | Rubik's Cube Encryption

- Built a three-factor biometric authentication system using fingerprint and iris recognition, achieving 95% accuracy.
- Applied image preprocessing and feature extraction techniques to improve model performance and recognition reliability.
- Integrated secure encryption mechanisms to enhance authentication security and prevent unauthorized access.
