SUMMARY

DevOps Engineer with **2+ years** of experience supporting cloud-native applications across **AWS** and **Kubernetes** environments. Skilled in **CI/CD automation**, **Docker, Helm, GitHub Actions, Argo CD,** monitoring, and production troubleshooting. Hands-on experience building **AI-powered Kubernetes troubleshooting** solutions and deploying scalable applications on **AWS EKS**.

SKILLS

- **Cloud & Infrastructure:** AWS (EC2, ECS, EKS, ALB, Lambda, IAM, S3, CloudWatch), Azure, GCP, Kubernetes, Terraform, Linux.
- **DevOps & Container:** Docker, Helm, Argo CD, GitLab CI/CD, GitHub Actions, NGINX Ingress, Git, Lens.
- **Monitoring & Security:** Prometheus, Grafana, Splunk, SonarQube, Vault, Snyk, Passbolt.
- **Programming & AI**: Python, SQL, YAML, HTML, CSS, React, FastAPI, Claude (LLM), Prompt Engineering.

PROFESSIONAL EXPERIENCE

ADPCX | DevOps Engineer | ***Sept 2026 – Present***

- Execute **production deployments** on **bare-metal Kubernetes** using **Argo CD** and GitOps practices, keeping releases consistent and traceable from Git.
- Design, build and maintain **CI/CD pipelines in GitHub Actions**, automating build, test and deployment workflows across services.
- Create and structure **Git repositories** and standardize pipeline automation for new services, reducing manual release effort.
- Monitor, inspect and troubleshoot Kubernetes workloads daily with **Lens**, resolving deployment, configuration and runtime issues.
- Manage **AWS** infrastructure for Kubernetes environments: configure **Route 53** for ingress and DNS management and provision **S3 buckets** for development teams.
- Monitor platform health and troubleshoot incidents using **Grafana, Prometheus and AWS CloudWatch** dashboards and alerts.
- Manage secure credential storage and sharing with **Passbolt** to protect secrets across environments.

OPT IT Technologies | DevOps Engineer | ***Sept 2025 – March 2026***

Project: ParkQuility and Shikshalokam

- Support production cloud-native applications on **AWS**, ensuring infrastructure stability across multiple environments.
- Manage and troubleshoot **AWS services** including **EC2, ECS, ALB, Lambda, IAM, and CloudWatch** to resolve deployment issues.
- Configure and maintain **CloudWatch alarms** for **10+ EC2 instances**, enabling proactive monitoring and incident detection.
- Execute Linux administration tasks including **SSH access setup**, sudo provisioning, and **GCP bastion host** storage expansion.
- Maintain CI/CD workflows, supporting container-based deployments and release validation for cloud-hosted applications.

Dell Technologies | DevOps Engineer | ***June 2024 – July 2025***

Project: DMX MyAccount – KOB Migration

- Migrated **25+ micro frontends (MFEs)** from PCF to **Kubernetes on Bare Metal (KOB)**, improving scalability and reducing platform dependency.
- Reduced deployment configuration errors by **40%** by developing reusable **Helm templates** across multiple Kubernetes environments.
- Standardized containerization strategy by designing **Dockerfiles** optimized for smaller image size and faster startup time.
- Improved release reliability and deployment consistency by automating **CI/CD workflows** using **GitLab pipelines.**

Tequed Labs | **DevOps Intern** | ***Nov 2023 – May 2024***

- Containerized applications using **Docker** by creating optimized Dockerfiles and managing container lifecycles.
- Built and maintained **GitLab CI/CD** pipelines using YAML to automate build and deployment workflows.
- Worked with **AWS** (EC2, S3, IAM), **Azure**, **Kubernetes**, and **Helm** to support cloud-native application deployments.

PROJECTS

AI Powered Kubernetes Troubleshooting Agent

- Built an AI-powered Kubernetes troubleshooting platform with React/Next.js, **FastAPI and Claude (LLM)** to automate pod failure diagnosis, using InsForge for authentication and real-time tracking.
- Developed a **kubectl-based investigation** engine that analyzes pods, logs, events and deployments to identify **CrashLoopBackOff, ImagePullBackOff and OOMKilled failures**, with AI-generated root cause analysis.
- Debugged OOM misclassification, event parsing, Docker and CORS issues, and validated the platform on a live Kubernetes cluster.

Three-Tier Microservices Architecture Deployment (Stan's Robot Shop)

- Deployed a microservices-based application on **Amazon EKS** consisting of services like cart, catalogue, user, shipping, and payment.
- Configured **IAM OIDC**, **AWS Load Balancer Controller (ALB)**, **Kubernetes Ingress**, and **Amazon EBS CSI** for secure networking and persistent storage.

EDUCATION

JSS Academy of Technical Education | Bachelor of Engineering in Computer Science

CGPA: 8.46 | Bengaluru, India | 2019 – 2023
